### 1. ATTESTATION OF TEST RESULTS

**COMPANY NAME:** Byrne Electrical Specialists Inc.

320 Byrne Industrial Dr. Rockford, MI 49341

USA

**EUT DESCRIPTION:** Wireless Charger

MODEL: BEX4756-XX

SERIAL NUMBER: non-serialized

**DATE TESTED:** September 26, 2016 – November 7, 2016

#### APPLICABLE STANDARDS

STANDARD TEST RESULTS

FCC PART 15 SUBPART C

UL LLC tested the above equipment in accordance with the requirements set forth in the above standards. All indications of Pass/Fail in this report are opinions expressed by UL LLC based on interpretations and/or observations of test results. Measurement Uncertainties were not taken into account and are published for informational purposes only. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

**Note:** The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. This document may not be altered or revised in any way unless done so by UL LLC and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL LLC will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, any agency of the Federal Government, or any agency of any government.

#### 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with ANSI C63.10-2013, FCC CFR 47 Part 2, FCC CFR 47 Part 15.

#### 3. FACILITIES AND ACCREDITATION

The test sites and measurement facilities used to collect data are located at 333 Pfingsten Road, Northbrook, IL 60062 USA.

UL NBK is accredited by NVLAP, Laboratory Code 100414-0. The full scope of accreditation can be viewed at <a href="http://ts.nist.gov/">http://ts.nist.gov/</a>

#### 4. CALIBRATION AND UNCERTAINTY

#### 4.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

## 4.2. SAMPLE CALCULATION

Sample Calculations

Radiated Field Strength and Conducted Emissions data contained within this report is calculated on the following basis:

Field Strength (dBuV/m) = Meter Reading (dBuV) + AF (dB/m) - Gain (dB) + Cable Loss (dB) Conducted Voltage (dBuV) = Meter Reading (dBuV) + Cable Loss (dB) + LISN IL (dB) Conducted Current (dBuA) = Meter Reading (dBuV) + Cable Loss (dB) - Transducer Factor (dBohms)

#### 4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

| Test                | Range       | Equipment      | Uncertainty k=2 |
|---------------------|-------------|----------------|-----------------|
| Conducted Emissions | 9k-150kHz   | LISN           | 3.84dB          |
| Conducted Emissions | 150k-30MHz  | LISN           | 3.65dB          |
| Radiated Emissions  | 9k-30MHz    | H-Field Loop   | 3.15dB          |
| Radiated Emissions  | 30-200MHz   | Bicon 10m Horz | 4.48dB          |
| Radiated Emissions  | 30-200MHz   | Bicon 10m Vert | 4.49dB          |
| Radiated Emissions  | 200-1000MHz | LogP 10m Horz  | 3.79dB          |
| Radiated Emissions  | 200-1000MHz | LogP 10m Vert  | 3.84dB          |

Uncertainty figures are valid to a confidence level of 95%.

### 5. EQUIPMENT UNDER TEST

#### 5.1. **DESCRIPTION OF EUT**

The EUT is a Wireless Qi Charger with two separate charging coils and two USB 5V outputs (maximum 1A each). Device is installed in single orientation only as part of a desk / table.

#### 5.2. MAXIMUM OUTPUT POWER

The transmitter has a maximum peak radiated output as follows:

| Frequency Range<br>(MHz) | Mode     | Output Field Strength<br>dBuV/m | Measurement Distance (meters) |
|--------------------------|----------|---------------------------------|-------------------------------|
| 0.110 - 0.205            | Charging | 82.62                           | 3.00                          |

<sup>\*</sup> the maximum output field strength is recorded at 3m distance. The Maximum level is for single coil only (reporting the highest emission). During testing both coils were active, and each operated as slightly different frequency. See section 7.1 for test data.

#### 5.3. **DESCRIPTION OF AVAILABLE ANTENNAS**

The radio utilizes an coil antenna

#### 5.4. **TEST CONFIGURATIONS**

The following configurations were investigated:

| EUT<br>Configuration | Description  |
|----------------------|--|
| 1                    | EUT with wireless loads (receiving coils with resistors and maximum power) and with USB loads (1A each). |
| 2                    | EUT without loads  |

5.5. **MODE(S) OF OPERATION** 

| Mode | Description   |
|------|---|
| 1    | EUT putting out full maximum power to wireless loads and resistors on USB ports |
| 2    | EUT powered but not charging (no loads)   |

#### SOFTWARE AND FIRMWARE 5.6.

none

Page 6 of 25

#### **WORST-CASE CONFIGURATION AND MODE** 5.7.

EUT was tested with receiving coil terminated into resistors providing maximum load.

#### 5.8. **MODIFICATIONS**

No modifications were made during testing.

#### 5.9. **DESCRIPTION OF TEST SETUP**

#### **SUPPORT EQUIPMENT**

#### TEST PROCEDURE

The EUT is placed on a non-conducting table 80 cm above the ground plane for below 1GHz measurements. The antenna to EUT distance is 3 meters.

For measurements below 1 GHz the resolution bandwidth is set to 120 kHz for peak detection measurements or 120 kHz for quasi-peak detection measurements for the 30-1000 MHz range, 9 kHz for peak detection measurements or 9 kHz for quasi-peak detection measurements for the 0.15-30 MHz range and 200 Hz for peak detection measurements or 200 Hz for quasi-peak detection measurements for the 9 to 150 kHz range. Peak detection is used unless otherwise noted as quasi-peak.

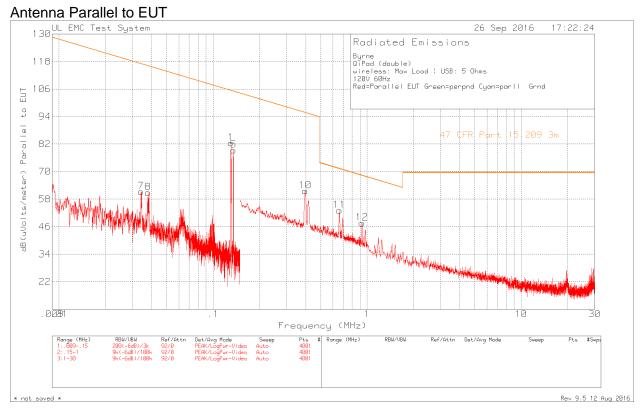

The spectrum from 9kHz to 1 GHz is investigated with the transmitter constantly transmitting into a fixed load to ensure maximum current draw from the charger.

The frequency range of interest is monitored at a fixed antenna height and EUT azimuth. The EUT is rotated through 360 degrees to maximize emissions received. Measurements are made with the antenna positioned at 0° and 90° in vertical polarization and in a horizontal polarization to the ground plane.

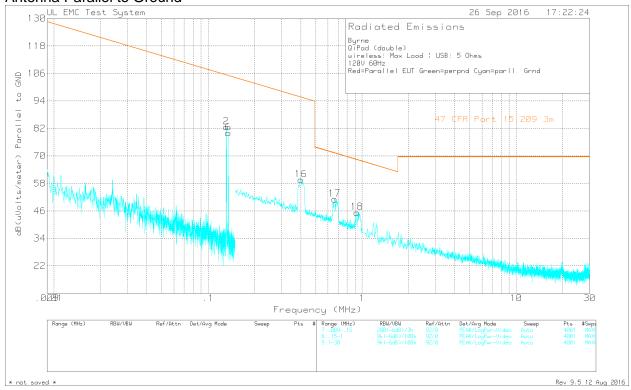

Although measurements were made on a test site other than an open area site, comparisions between an open area site and the chamber have been made to show that measurements in the chamber correlate to those on an open area site.

#### **RESTRICTED BANDEDGE EMISSIOS**

Bandedge measurements were conducted using radiated field strength and 20dBc points. Attempt was made to move the device up and down and around the charging pad. This caused the impedance of the load to change and maximum range of frequencies was used. Special Attention was paid to 110kHz.
